

Corporate clients don't think in payment rails. They think in workflows. The bank that meets them there wins the relationship - and keeps it.

For years, the corporate banking experience has been shaped by what banks can technically support - not by what business clients actually need. The result is a fragmented payables workflow: different portals for different channels, different teams managing different rails, and a customer experience that reflects internal complexity rather than client intent.

Fintechs identified this gap and built around it. They didn't replace the bank - they inserted themselves between the corporate client and the bank's infrastructure, owning the relationship in the process.

The answer for banks isn't to compete feature-for-feature with fintechs. It's to go deeper - to offer something fintechs fundamentally cannot: a single, trusted platform that connects every way a corporate client sends payment instructions to every rail, with payee preferences managed intelligently and the whole experience accessible from within the bank's own digital platform.

That's what Integrated Payables delivers.

THE SCALE OF THE CHALLENGE

81%

of US businesses already use a fintech for at least one payment or cash management service.

DATOS INSIGHTS

5+

payment channels a typical corporate client uses - each often handled by a separate system at the bank.

12%

of businesses not yet using a fintech say they plan to - meaning the window for banks to act is narrowing fast

DATOS INSIGHTS

WHY CORPORATE CLIENTS LOOK ELSEWHERE

Corporates send payments many ways

SFTP file drops, ERP exports, APIs, online portals, and increasingly AI agents - each with different formats, volumes, and timing expectations.

SFTP

ERP

API

Online

AI agents

Banks manage each in a separate system

Operations teams toggle between platforms, one per channel. The experience the corporate client receives is shaped by internal system constraints - not their needs.

Fintechs fill the gap

Built for specific workflows, specific channels, specific clients. They don't need to replace the bank - just own the layer above it. Banks lose the relationship not on price, but on experience.

FINZLY'S ANSWER - INTEGRATED PAYABLES

One intelligent platform. Every source. Every rail.

Source-agnostic payables connected to all payment rails - built for banks, composable into your digital banking platform

PAYEE PREFERENCE MANAGEMENT

Payees choose how they want to be paid - ACH, wire, instant rail. Preferences are stored and honoured automatically on every subsequent payment, removing manual routing decisions from both the bank and the corporate client entirely.

PLUG-AND-PLAY INTO DIGITAL BANKING

A composable module that sits directly inside your existing digital banking platform. Corporate clients manage all payables - every channel, every rail, every payee preference - through one coherent interface. No separate portals, no context switching.

KEY BENEFITS FOR BANKS

Revenue retention

Payees choose how they want to be paid - ACH, wire, instant rail. Preferences are stored and honoured automatically on every subsequent payment, removing manual routing decisions from both the bank and the corporate client entirely.

Operational efficiency

One platform replaces five. Operations teams work from a single view - no toggling, no duplicate processing, no channel-specific exception handling.

Embedded banking ready

High-volume platforms and API-first businesses can connect directly. No BaaS intermediary needed - the bank owns the relationship and the revenue.

WHAT BANKS ACHIEVE

1

platform for all channels and rails

~100%

straight-through processing

DECREASE

ops overhead and manual routing

INCREASE

corporate retention and revenue

Composable by design

Integrated Payables can be deployed as a standalone module or layered alongside Account Galaxy's virtual accounts and specialty account structures. For banks serving fintechs, property managers, marketplaces, or any high-volume payer, the combination creates a payments and accounts experience that no fintech intermediary can replicate.

PART OF A COMPLETE MODERN OPERATING SYSTEM FOR BANKS

Integrated Paybles operates within Finzly's BankOS platform - a modular set of Galaxies designed to support end-to-end corporate banking. Together, BankOS Galaxies enable banks to deliver comprehensive banking services on a single platform, matching the breadth and sophistication of the largest global institutions.

ABOUT FINZLY

Finzly is a modern operating system that serves as the innovation core for banks, free from legacy core dependencies. It manages traditional and tokenized money and their movement on a single platform, with advanced payment processing and a unified ledger, enabling new growth channels from embedded banking, FX trading, and payments.
