A unified, API-first platform giving banks the infrastructure to deliver embedded accounts, multi-rail and blockchain-extended payments, pay-by-bank experiences, and tokenized money capabilities - all under the bank's full control.

THE EMBEDDED BANKING IMPERATIVE

Banks today are under pressure from fintechs, corporates, marketplaces, and modern platforms that expect instant accounts, multi-rail payments, real-time reconciliation, and seamless API integration. BaaS intermediaries that promise to bridge this gap often fail at scale - ceding revenue, introducing friction, and eroding the bank's control of the client relationship.

Finzly BankOS acts as a real-time sidecar core - giving banks the complete infrastructure to deliver embedded banking directly: accounts, payments, pay-by-bank, and tokenized money, all on APIs the bank fully owns and controls.

THE ENTERPRISE INTEGRATION IMPERATIVE

Enterprise resource planning (ERP) platforms, treasury management systems, and financial control frameworks all maintain structured, hierarchical ledgers that track transactions across business units, subsidiaries, cost centers, and currencies. These clients do not want to operate in a bank's portal, download CSV files, and reconcile manually. They want programmatic, real-time integration where the bank's account structures map directly onto the enterprise's own ledger dimensions. When a bank cannot offer that level of granularity, the corporate treasury looks elsewhere.

DATOS INSIGHTS

PAY-BY-BANK: EMBEDDED CHECKOUT & APIS

Merchants, platforms, corporate billers, and marketplaces are moving payment flows off card rails to reduce interchange costs and improve settlement speed. Finzly gives banks a ready-to-deploy pay-by-bank capability - as embeddable checkout widgets and as full APIs - so the bank captures this shift rather than watching it happen through a third party.

CHECKOUT - SELECT PAYMENT METHOD

Order total · 3 items

\$4,250.00

☒ Pay by bank

No fees · Instant

☐ Credit / Debit card

Visa · Mastercard · Amex

☐ PayPal

PayPal balance or card

Pay \$4,250.00 via bank account

Embeddable widgets

- White-label embeddable checkout
- Bank selection & account linking
- Payment confirmation flows
- Mobile-ready, fully brandable

A2A & VAM APIs

- A2A initiation & real-time settlement
- Mandate & recurring payment support
- Refund, reversal & dispute APIs
- Multi-rail routing under one API

WHO CAN EMBED PAY-BY-BANK

Merchants & e-commerce

Enable bank-direct checkout.

Corporate billers, subscription p/f

Accept direct bank payments seamlessly.

Marketplaces

Instant payouts and collections, no cards.

Government & utilities

Bulk disbursements and collections.

CORE EMBEDDED BANKING CAPABILITIES

Virtual Account Hierarchies & Real-Time Ledger

Multi-level nested structures - subsidiaries, cost centers, FBO pools - with instant multi-currency, multi-asset ledger accuracy. Unified ledger API extends to tokenized assets.

ERP & TMS Integration

Programmatic, real-time connectivity via open APIs, webhooks, ISO 20022, MT940, and MT950 - bank account structures map directly onto enterprise ledger dimensions.

Multi-Rail & Blockchain-Extended Payments

FedNow, RTP, ACH, Fedwire, Swift from a single API - extending into blockchain rails for tokenized settlement, giving banks a unified payment API across traditional and emerging rails.

Automated Reconciliation

Continuous real-time matching across all accounts - GAAP-ready accounting, liquidity pooling, sweeps, and configurable rules. Same reconciliation model extends to tokenized assets.

Compliance, KYC/KYB & Fraud Controls

Embedded onboarding workflows, AML monitoring, fraud risk checks, and full audit trails - bank-owned, compliant from day one, and applicable across all program types.

Own the relationship

Bank sits at the center of client payment flows - no intermediary.

Capture card migration

Monetize the shift from cards to bank-direct A2A payments.

Real-time control

Instant visibility into cash, payments, and liquidity across all programs.

Stay compliant

KYC/KYB, AML, fraud controls, and full audit readiness built in.

API-FIRST - EVERY CAPABILITY, FULLY EXPOSED

Every Galaxy in Finzly BankOS is built API-first - there is no separate integration layer to maintain. Account structures, payment execution, reconciliation, compliance workflows, and digital experiences are all natively accessible via secure, standards-based APIs. The bank owns the API relationship end to end.

Account Galaxy APIs	Payment Galaxy APIs	Digital Galaxy APIs
- Virtual account creation at scale - Real-time balances & transactions - Nested hierarchy management - FBO, escrow & specialty structures - Ledger extends to tokenized assets	- Single API for all payment rails - ISO 20022-native processing - Real-time posting & settlement - Pay-by-bank A2A APIs - Rails extend to blockchain settlement	- White-label UI components - Banker & partner portal APIs - Webhooks & event streams - Role-based access & entitlements - Real-time dashboards & analytics

MULTI-RAIL PAYMENTS - EXTENDING INTO BLOCKCHAIN RAILS

UNIFIED PAYMENT API FOR ALL RAILS

Banks using Finzly's unified payment API gain a single integration surface that spans today's rails and tomorrow's tokenized rails - no re-platforming required when clients demand blockchain-based settlement.

Traditional rails

FedNow	RTP	ACH
Fedwire	Swift	Cards

Blockchain rails

Tokenized deposits	On-chain / off-chain bridge
Stablecoin settlement	

FINZLY VS. TRADITIONAL BAAS PLATFORMS

Capability	Traditional BaaS	Finzly BankOS
Real-time ledger & balances	Delayed, fragmented	Instant, unified, high-scale
Pay-by-bank & A2A	Not available	Widgets + full API suite
ERP / TMS integration	CSV-based, manual	Real-time APIs, ISO 20022
Blockchain / tokenized rails	Not supported	API-extensible to blockchain rails
Tokenized money APIs	Not supported	Unified ledger extends to tokenized assets
Partner onboarding control	Intermediary manages	Bank-owned KYB/KYC & entitlements
Bank revenue retention	Fees lost to intermediary	All revenue on bank balance sheet

HOW BANKS STAY IN CONTROL

Unlike BaaS platforms that sit between the bank and its clients, Finzly keeps the bank in the center — owning the ledger, the compliance stack, the partner onboarding process, and the revenue. Every API call, every payment, and every account opens on the bank's own infrastructure.

Bank owns the ledger

All virtual accounts, sub-accounts, and FBO structures post to the bank's own real-time ledger - no third party holds assets or controls data.

Bank onboards partners

Partners - fintechs, corporates, platforms - are onboarded under the bank's own KYB/KYC workflows, entitlements, and compliance framework from day one.

Bank controls access

API key governance, role-based entitlements, and partner permission tiers are fully managed by the bank - not delegated to a middleware layer.

Bank governs compliance

KYC/KYB, AML, fraud controls, and audit trails all sit within the bank's compliance framework - every program, including tokenized money programs, is audit-ready.

Bank captures revenue

Fees, float, interchange alternatives, and deposits from all embedded programs flow to the bank's balance sheet - not an intermediary's P&L.

Bank sets the rules

Payment routing, sweep logic, entitlements, and product configurations are set by the bank - composable and adjustable without IT dependency.

Part of a Complete Modern Operating System for Banks

Embedded banking capabilities operate within Finzly's BankOS platform — a modular set of Galaxies designed to support end-to-end corporate banking. Together, BankOS Galaxies enable banks to deliver comprehensive banking services on a single platform, matching the breadth and sophistication of the largest global institutions.

ABOUT FINZLY

Finzly is a modern operating system that serves as the innovation core for banks, free from legacy core dependencies. It manages traditional and tokenized money and their movement on a single platform, with advanced payment processing and a unified ledger, enabling new growth channels from embedded banking, FX trading, and payments.
