Finzly BankOS gives sponsor banks the complete infrastructure to run fintech and large-platform partnerships in-house - onboarding partners under full bank control, monetizing every service layer, and eliminating the BaaS intermediary taking the margin.

WHY BaaS PLATFORMS NO LONGER DO THE JOB

The BaaS model was built for simpler times. But the liabilities - compliance exposure, revenue sharing, operational opacity, and loss of client ownership - have become impossible to ignore. Large platforms, marketplaces, and enterprise software companies are now as significant a BaaS revenue opportunity as fintechs, and they demand a level of integration and control that BaaS intermediaries simply cannot deliver.

Traditional BaaS model

- Intermediary owns the partner relationship
- Bank shares fees with BaaS platform
- Ledger outside the bank
- Bank accountable but has no visibility
- Audit trails incomplete or inaccessible
- Onboarding takes weeks or months
- Bank cannot upsell value-added services

Finzly BankOS model

- Bank owns every partner relationship
- All fees retained on bank balance sheet
- Bank-owned ledger
- Real-time visibility across all programs
- Complete audit trails, bank-controlled
- Onboarding in days via templates & APIs
- Bank monetizes recon, VAM, A2A, and more

PARTNER BANKING IN THREE STEPS - BANK ALWAYS IN CONTROL

1 Bank onboards partners through BankOS

The bank's team onboards each partner - fintech, platform, or corporate - using an intuitive UI and automated KYB/KYC workflows. Finzly provides hands-on implementation support to get every program live quickly. The bank approves, configures, and activates every relationship under its own compliance framework.

FBO structure setup

KYB/KYC
orchestration

support

2 Bankers configure VAM — simple, guided, and fully supported

Bankers use an intuitive UI to set up each partner's virtual account structure - FBO pools, customer sub-accounts, payment rules, and sweep logic - without needing technical expertise. Finzly's team is available to guide configuration for complex or custom structures. Specialty accounts like escrow, suspense, or disposable accounts are added as easily as standard ones.

FBO & customer sub-accounts

Payment routing rules

Sweep & pooling config

Escrow & specialty accounts

Multi-currency support

PARTNER TYPES - FINTECHS AND LARGE PLATFORMS

Fintech partners

- Neobanks & challenger banks
- Payroll & expense platforms
- Crypto & digital asset fintechs

Large platform partners

- Marketplaces & gig platforms
- ERP & accounting software
- Healthcare, Property management & vertical SaaS providers

3 Partners self-serve - APIs, experiences, and real-time visibility

Partners access a dedicated self-service portal - or integrate directly via APIs - to manage virtual accounts, initiate and track transactions, run reconciliation, and access reporting. Banks can offer both embeddable experience widgets and full APIs for A2A payments and VAM, giving each partner the integration model that fits their platform. The bank governs scope, permissions, and visibility throughout.

Self-service VAM portal

A2A payment APIs

VAM APIs

Embeddable Pay-by-Bank widgets

Real-time recon & reporting

Especially with fintech partnerships, the banks are accountable for each transaction that happens and need audit trails. As the ledger sits outside, the banks have little or no control at all. The unified ledger eliminates this.

Own every partner

Bank controls onboarding, compliance, and the client relationship.

Keep all revenue

No BaaS split - every fee and float dollar stays with the bank.

Full audit control

Unified ledger inside the bank - complete transaction visibility.

Launch in days

Pre-built templates, guided setup, and APIs compress time-to-live.

BANK REVENUE - EVERY SERVICE LAYER MONETIZED

With Finzly BankOS, the bank owns the entire service stack and monetizes each layer directly - with no intermediary taking a share. Value-added services like reconciliation, liquidity management, and pay-by-bank become new revenue lines, not costs absorbed by a third party.

Service layer	Via BaaS intermediary	Via Finzly BankOS
Account & VAM fees	Split with intermediary	100% to bank
Transaction / payment fees	Split with intermediary	100% to bank
Float & deposit income	Intermediary holds float	Bank holds & earns float
Reconciliation-as-a-service	Not offered	New fee revenue stream
Liquidity & sweep services	Not offered	New fee revenue stream
Pay-by-bank / A2A fees	Not available	Bank captures A2A revenue
FX & multi-currency	Lost to third party	Bank earns FX spread
Data & reporting services	Not offered	Premium analytics revenue

PAY-BY-BANK FOR FINTECH PARTNERS - APIs & EMBEDDABLE EXPERIENCE

Fintech and platform partners are actively moving payment flows off card rails to reduce interchange costs and access real-time settlement. Banks using Finzly can offer partners both embeddable pay-by-bank widgets and full A2A payment APIs - keeping the bank at the center of their partners' payment flows.

PARTNER CHECKOUT - EMBEDDED VIA BANK-ISSUED API OR EXPERIENCE

Invoice · PayFlow merchant checkout \$12,750.00

☒ Pay by bank

No fees · Instant

☐ Credit / Debit card

Visa · Mastercard · Amex

☐ PayPal

PayPal balance or card

Pay \$12,750.00 via bank account

Embeddable widgets

- White-label checkout component
- Bank selection & account linking
- Payment status & confirmation UI
- Mobile-ready, partner-brandable

A2A & VAM APIs

- Account-to-account initiation
- Mandate & recurring payments
- Virtual account & ledger APIs
- Real-time webhooks & status

COMPLETE BANK CONTROL - EVERY DIMENSION

With Finzly BankOS, the bank is the platform. There is no intermediary between the bank and its partners. Every account, transaction, compliance decision, and revenue stream sits on the bank's own infrastructure - governed, visible, and auditable in real time.

Ledger control

Unified ledger lives inside the bank.
Every transaction across every partner posts in real time - no external ledger, no data gap, no blind spots.

Partner governance

Bank approves, configures, and manages every partner. Entitlements, limits, and permissions are bank-set - not delegated to any middleware layer.

Compliance & audit

Unified ledger lives inside the bank.
Every transaction across every partner posts in real time - no external ledger, no data gap, no blind spots.

Revenue ownership

All fees, float, and value-added service revenue flow directly to the bank's balance sheet. No sharing with a BaaS intermediary at any layer.

Real-time visibility

Bank sees every partner program, balance, and transaction in real time - no waiting for reports, no reconciliation lag, no opacity.

Configurable rules

Payment routing, sweep logic, account structures, and product configurations are set by the bank - composable without IT projects or core changes.

Keep all revenue

No BaaS split - every fee and float dollar stays with the bank.

Own the ledger

Unified ledger inside the bank - complete audit trail always.

Monetize A2A

Offer pay-by-bank APIs and widgets as cards give way to A2A.

Launch in days

Templates, guided setup, and APIs compress partner time-to-live.

Stay compliant

Bank-owned KYB/KYC, AML, and audit readiness throughout.

Partner Banking operates within Finzly's BankOS platform - a modular set of Galaxies designed to support end-to-end corporate banking. Together, BankOS Galaxies enable banks to deliver comprehensive corporate banking services on a single platform, matching the breadth and sophistication of the largest global institutions.

ABOUT FINZLY

Finzly is a modern operating system that serves as the innovation core for banks, free from legacy core dependencies. It manages traditional and tokenized money and their movement on a single platform, with advanced payment processing and a unified ledger, enabling new growth channels from embedded banking, FX trading, and payments.
