Account Galaxy gives banks the virtual account infrastructure to build and manage purpose-built deposit products - IOLTA, escrow, class action settlement, POBO/COBO, multi-currency, and complex corporate hierarchies - on a single real-time platform.

THE SPECIALTY DEPOSIT OPPORTUNITY

Corporate clients, law firms, title companies, fintechs, and regulated verticals need deposit structures that go far beyond a standard DDA - with built-in rules, audit trails, beneficiary tracking, multi-party flows, and real-time reconciliation.

Account Galaxy lets banks launch these products natively - without workarounds, external fintechs, or costly core modifications - and compose them to the exact operating model of each client.

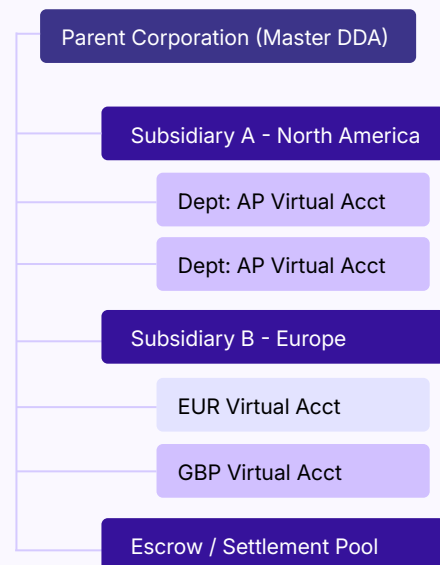

REVENUE-GENERATING SPECIALTY DEPOSIT TYPES

- **IOLTA / Attorney Trust Accounts:**
Segregated client funds with interest tracking, beneficiary ledgers, and full compliance audit trails for law firms and title companies.
- **Class Action Settlement Accounts:**
Centralized settlement funds with automated claimant disbursements, payment rules, and reporting.
- **Escrow Accounts:**
Conditional release logic, milestone-triggered disbursements, and multi-party visibility for real estate, M&A, and embedded platforms.
- **Multi-Currency Accounts:**
Receive, hold, and transact in multiple currencies via virtual accounts mapped to core DDAs - faster global banking for SMBs.
- **HSA / FSA / Benefits Accounts:**
Composable deposit structures for health benefit administrators with rules-based spend controls and real-time balance visibility.
- **Sweep & Suspense Accounts:**
Automated concentration, zero-balance sweep, and suspense structures for treasury optimization and operational float management.
- **Fintech & Embedded Program Accounts:**
Virtual account structures for fintech partners, digital wallets, and BaaS programs - with full ledger control, KYC/KYB, and API-native integration.

POBO / COBO & COMPLEX CORPORATE HIERARCHIES

Account Galaxy natively models multi-entity, multi-subsidiary structures that corporate treasury teams actually use - enabling Payment on Behalf Of (POBO) and Collection on Behalf Of (COBO) without workarounds.

EXAMPLE: CORPORATE POBO/COBO HIERARCHY

- **POBO**
Parent executes payments on behalf of any subsidiary with full per-entity audit trail.
- **COBO**
Collections flow to a central virtual account, auto-routed, reconciled, and reported per subsidiary.
- **Nested hierarchies**
Collections flow to a central virtual account, auto-routed, reconciled, and reported per subsidiary.
- **Rules-driven**
Configure entitlements, sweep, pooling, and payment rules per corporate client.

Benefits and Growth Opportunities

KEY BENEFITS

Bring VAM in-house

Retain fees, deposits, and client relationships on your balance sheet.

Match large-bank capabilities

Compete with JPM, Citi, and FBO-based platforms.

Composable product design

Package account types into tailored offerings without core changes.

Full compliance readiness

Embedded KYC/KYB, AML, GAAP accounting, and audit trails.

Onboard faster

Launch vertical products in days using pre-built templates and APIs.

Real-time control

Instant visibility into cash, payments, and liquidity across all structures.

Platform Capabilities & Business Value

PLATFORM CAPABILITIES

Account Galaxy is a centralized, API-native Virtual Account Management platform with automated payables, receivables, and real-time reconciliation built in. It enables banks to model multi-entity hierarchies, execute payments from virtual accounts, and maintain continuous visibility across balances and transactions.

Core platform capabilities

Real-time ledger

- Multi-currency, multi-asset
- Instant balance accuracy
- No batch windows

Reconciliation engine

- Continuous auto-matching
- Eliminates manual recon
- Audit-ready records

Multi-rail payments

- ACH, RTP, FedNow
- Fedwire, Intl wires
- Payables & receivables

Compliance & audit

- KYC/KYB embedded
- AML & fraud monitoring
- GAAP accounting

API-native corer

- ERP & TMS integration
- Open APIs for fintechs
- No core replacement

Self-service UX

- Banker onboarding templates
- Corporate self-service portal
- Real-time dashboards

Business orchestration

- **Composable deposit products** - package VAM capabilities into escrow, HSA/FSA, sweep, suspense, and custom structures.
- **Corporate account structures** - support complex hierarchies, subsidiaries, departments, and multi-entity arrangements including POBO/COBO.
- **Treasury integration** - seamless connectivity to ERP and treasury systems for automated payables, receivables, and liquidity management.
- **Rules-driven operations** - configure entitlements, sweeping, pooling, and payment rules tailored to each corporate client.
- **Easy onboarding** - pre-configured templates and APIs accelerate setup, minimizing manual intervention.

Experience orchestration

- **Fast banker onboarding** - bankers onboard corporates instantly using intuitive UI, workflows, and FBO structures.
- **Self-service account management** - corporates create, manage, and adapt virtual accounts independently, without bank intervention.
- **Payables & receivables automation** - corporates manage payments and collections efficiently within the VAM digital experience.
- **Open APIs for integration** - VAM connects effortlessly with ERPs, treasury systems, and embedded platforms.
- **Real-time visibility & insights** - corporates track balances, payments, and reconciliations instantly through dashboards and reports.

MULTI-CURRENCY: MATCH GLOBAL BANKING SPEED

Multi-currency virtual accounts let banks launch global-ready offerings for SMBs without heavy dependence on core systems. Accounts are set up on Finzly's modern platform, seamlessly mapped back to core DDAs for posting and reporting, while still allowing SMBs to receive, hold, and transact in multiple currencies.

Part of a Complete Modern Operating System for Banks
