Token Galaxy: Unified Banking Platform for Traditional and Tokenized Money

Token Galaxy, powered by Finzly BankOS, is a unified, futureproof platform designed to let banks operate across all forms of money, traditional and tokenized, confidently and efficiently.

It addresses banks' key challenges by:

Seamless Fiat-Digital Integration	Multi chain, Multi-issuer Connections	Unified Client Experience for Money Movement	Cross-asset Liquidity and Conversion	Strong Regulatory and AML Compliance
Token Galaxy unifies traditional money and tokenized money on one platform, letting FIs manage all forms of money in a single unified location.	Interoperable connections across blockchains and issuers for easy asset transfers, shared liquidity, without complex integrations.	Provide customers with a unified experience for both traditional & tokenized currency, easily integrated into your digital experience.	Efficient on-and off-ramp tools and cross asset trading streamline treasury workflows across traditional and tokenized money.	Pre-integrated compliance workflows providing real-time, multi-asset transaction screening and automated risk monitoring features.

End-to-end Unified Traditional and Tokenized Accounts and Money Movement

Features

Regulatory Compliance

Battle-tested for trust.

Embedded risk and compliance workflows deliver regulatory adherence, audit readiness, real-time AML transaction monitoring for traditional and tokenized money movement.

Bank-grade Secured Wallets

Bank-grade security, zero single points of failure.

Multi-party computation (MPC) ensures private keys never exist in one place, split and stored across different nodes.

Unified Payments

One unified API, all rails.

Access ACH, Wires, RTP, FedNow, SWIFT, stablecoins, tokenized deposits, and CBDCs (in future) through a single integration, simplifying treasury operations.

Single Pane for Operators

Total operational visibility.

Operators get a unified view of all traditional and tokenized transactions, with real-time oversight, reporting, and full operational control.

Multi-asset Payment Support

Seamlessly bridge traditional, tokenized assets.

Receive fiat payments, like payroll, on traditional rails and automatically convert and deposit them to tokenized assets.

Liquidity Management

Real-time control and optimization.

Monitor, manage liquidity across multiple networks, banks, currencies, and chains with our comprehensive liquidity management tools.

Tokenized Cards

Multi-asset, multi-currency debit cards.

Issue debit cards with automated FX conversion, network settlement, and built-in accounting for seamless payments.

Customer Experience

Modern, embeddable, unified.

Experiences across digital assets, DDA, integrated payments, FX conversion, and configurable fees give banks full control over the user experience.

The only platform with **unified accounts, payments and customer experience** for traditional and tokenized money.

Use Cases

Multi-asset Global Treasury

Offer clients one platform for all their assets.

Enable management of fiat, foreign currency, and tokenized assets seamlessly. Provide FX and asset trading, payments, internal transfers, sweeps, and liquidity management-helping clients optimize capital, positioning your bank as the go-to, full-service provider.

International Payments

Faster, cheaper, compliant cross-border transfers.

Let clients send and receive fiat or digital assets instantly at lower fees, with complete regulatory compliance. Compete with fintechs, reclaim lost customers quickly and easily, and strengthen customer loyalty by offering a trusted, bank-backed solution.

Unified Accounts for Payroll

Flexible payroll solutions for your clients.

Enable payroll in fiat or digital currency via ACH or instant payment networks. Simplify reconciliation, speed up processing, and deliver a modern experience, enhancing client satisfaction while reinforcing your bank's operational efficiency.

BankOS: The Innovation Core for Modern Banking

BankOS is Finzly's unified platform, seamlessly integrating all banking operations and serving as the innovation core for banks. Powered by a universe of "galaxies," each delivering a unique capability, BankOS connects them all to provide a completely integrated, cohesive experience across traditional and tokenized assets, giving bankers with streamlined operations and giving clients modern, connected financial services.
